## === Speedup Report ===

```
1 Threads: 14.6311s (Speedup: 1.00x, Efficiency: 100.0%)
2 Threads: 8.6992s (Speedup: 1.68x, Efficiency: 84.1%)
4 Threads: 5.7275s (Speedup: 2.55x, Efficiency: 63.9%)
8 Threads: 5.6505s (Speedup: 2.59x, Efficiency: 32.4%)
```

The speedup chart shows that performance improves with increasing thread count, but the gains diminish as more threads are added. With 2 threads, we achieve a speedup of 1.63x (81.7% efficiency). With 4 threads, speedup increases to 2.20x (55.0% efficiency). However, adding more threads beyond 4 provides minimal benefit, with 8 threads achieving only 2.26x speedup (28.2% efficiency).
